DETAILED ACTION

Priority

1. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

Claim Rejections - 35 USC § 103

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 1-4 are rejected under 35 U.S.C. 103(a) as being unpatentable over U.S. patent number 5,625,700 (Sone) in view of U.S. 2002/0197512 A1 (Aizawa et al).

Regarding claim 1, Sone discloses an electromagnetic sound producing device comprising: a case (column 4 line 63 item 32); a yoke (column 4 line 40 item 5), a coil (column 4 line 43 item 10), a permanent magnet (12) being made of plastic magnetic material (column 6 lines 57-60), and a diaphragm (column 4 line 55 item 24) provided in the case.

Sone does not specifically disclose the permanent magnet being made of SmFeN-base isotropy plastic magnetic material.

However, SmFeN magnets are being employed as a magnet is well-known in the art. Aizawa et al teaches that the magnets are made of SmFeN (# 4). Therefore, it would have been obvious to one ordinary skill in the art to use any material for the permanent magnets (120) of Sone such as SmFeN-base isotropy plastic magnetic material for providing a high maximum energy product (# 4 of Aizawa et al).

Regarding claim 2, Sone also discloses wherein the permanent magnet has a cylindrical shape (figure 9 item 12).

Regarding claim 3, Sone further shows the yoke has a center pole (figure 1 item 6) and is mounted on a base (figure 1 item 8) of the case, the coil has a cylindrical shape and is mounted on the yoke, surrounding the center pole (figure 1).

Regarding claim 4, Sone also discloses wherein the diaphragm is mounted on the permanent magnet (figure 15 column 6 lines 61-67).
